

# Clean Code

Collection of prinziplles, examples, hints,... for helping to write clean code.

- [Priciples](#)

# Principles

## KISS - keep it simple, stupid

code should be as simple as possible. don't overengineer, avoid unnecessary complexity

## DRY - don't repeat yourself

don't duplicated code

## YAGNI - **You aren't gonna need it**

additional functionality should be added when it is required not beforehand
