

Docker-compose CLI

Basics

use `docker-compose -p "nginx-proxy-manager" up -d` to:

- `-p` with custom stack name
- `-d` as daemon (in background)
- `-f` from specific docker-compose file

docker compose file

- <https://docs.docker.com/compose/compose-file/compose-file-v3/>

```
version: '3.1'

services:

  my-car:

    image: my-car-next-js
    user: 1000:1000
    build:
      context: ./
      dockerfile: "./development.Dockerfile"
    ports:
      - 3000:3000
    volumes:
      - ./:/app
    entrypoint: ["sh", "./development.entrypoint.sh"]
```
