

Permissions, Groups

TODO

<https://www.pluralsight.com/blog/it-ops/linux-file-permissions>

groups

- add primary group (restart is necessary): `sudo usermod -g primarygroupname username`
- add group: `sudo usermod -a -G secondarygroupname username`

desc:

- `-g` primary group assigned to the users
- `-G` Other groups the user belongs to
- `-a` Add the user to the supplementary group(s)

chmod

chown
